ContextCut / Round 1 proposal

Unleash Your Creativity

Official static validation passed - assigned NAS execution pending

1. What does the Skill do?
ContextCut reviews draft interview quotations against authorized complete transcripts and prepares source-linked editorial warnings and alternatives.

2. Target user and problem
Editors and small documentary teams need shorter scripts while preserving qualifications, negations and attribution in private, unpublished interviews.

3. Proposed solution
Match each draft quotation to its actual source context, flag supported changes in apparent meaning and let the editor decide on a faithful alternative.

4. Core user flow
Select draft and transcripts; authorize scope and processing; review each quotation; accept, retain or leave unresolved; approve a separate report.

5. Substantive difference
The workflow targets meaning lost during quotation selection, preserves unresolved attribution and records every editor decision alongside evidence.

ContextCut / Round 1 proposal

Unleash Your Creativity

Official static validation passed - assigned NAS execution pending

6. UGREEN AI NAS capabilities

File discovery establishes the source set and freshness; document lookup and reconciliation retrieve context; optional supported transcription adds evidence; approved text saving preserves the review.

7. Technical approach

The parent delegates ug-filesystem discovery/verification to file-agent, ug-document qa/reconcile to document-agent, and ug-knowledge transcription/save-text to knowledge-agent. Actual passages and attribution ground review. Inputs include draft and authorized sources. Confirm model routing; prefer local processing. Each write requires approval. No media editing or external API is bundled. Codex assisted development.

8. Current development status

Implemented: original Markdown workflow, references, synthetic fixtures, concept demo, proposal and local checks. UGOS Skill Creation Tool 0.7.3 and catalog 2.0.0 were used to reconcile authoring; official static reports accompany the release. NAS installation, execution, extraction accuracy and model routing remain untested. Entrant review is pending.

9. Final validation plan

Core one: detect a removed shipping exception and negation with exact source context. Core two: preserve a faithful quote and invalidate approval after source changes. Edge: missing or ambiguous attribution must remain unverified without invented text or timestamps.

10. Known limitations

Semantic interpretation and transcription may be wrong; editorial review remains human. Locator availability depends on experts. The Skill produces reviewed text and never cuts, renders or publishes media.

Third-party information (excluded from substantive response limit)

UGREEN tools/experts: UGREEN terms; no kit redistributed. No third-party runtime code, dataset or model bundled. Separate demos: Rubik, SIL OFL 1.1. PDF creation: original Python standard-library code. Local checks: pypdf, BSD-3-Clause; PyYAML, MIT. Sources and full disclosures accompany the Skill.
